

# PCMIS Integrations

Connecting Systems. Supporting Safer,  
Joined-Up Care

## Designed to work with your wider digital ecosystem

Mental health services operate across multiple digital systems. PCMIS Integrations enable secure, governed data exchange with trusted partner platforms — reducing duplication, improving data quality, and strengthening continuity of care across pathways:

- **Built around PCMIS workflows**
- **Secure, clinically safe data exchange**
- **Aligned to ICS and provider priorities**

## Safe, Structured Information Sharing

PCMIS uses API-based integrations to connect with partner systems, ensuring information flows reliably and securely into the core patient record.

### Two Way Integrations

PCMIS securely integrates two-way with a range of digital mental health providers, automatically sharing patient details, assessments, and outcomes to eliminate double data entry and keep records up to date.

These integrations help services reduce waiting times and improve access by quickly matching patients to appropriate digital support. Patients can start care sooner, choose flexible options, and receive support even if they are reluctant to attend face-to-face therapy.

PCMIS integrates with SilverCloud Health, Limbic, Koa Health, Paddle, and Dr Julian, reducing admin, improving visibility of risk and outcomes, and creating smoother care pathways for better experiences for both patients and staff.

# Designed for Integrated Care Systems

## Supporting Joined-Up Pathways

PCMIS integrations enable smoother transitions and shared care information across teams and services. They reduce duplication and administrative burden, whilst automated data exchange cuts out re-entry, reduces errors, and frees clinician and admin time. The data quality ensures real-time system-to-system flows - delivering consistent, current information.

## Business Benefits for Services

### **Enable System-Wide Visibility**

Shared data drives better oversight of referrals, outcomes, and service activity.

### **Align with ICS Digital Strategies**

Designed to support interoperability and local digital roadmaps.

### **Support Performance and Reporting**

Consistent data flows improve clinical assurance and operational performance insights.

### **Scale Safely and Sustainably**

Implementations follow clinical safety and technical best practice.

## A Connected Approach to Care

PCMIS Integrations help services move beyond isolated systems — enabling safe, efficient, and coordinated care across partners.

To explore available integrations and how PCMIS can link with your local digital landscape, contact your Client Engagement Manager for a conversation or demonstration.
